NEWS RELEASE

ABOUT NUTEK:

Launched in 2007, Nutek brings high-performance products to the market with a Smart Green™ and Pure Green™ focus. With 100% biodegradable formulations, superior performance and recyclable packaging,

Nutek's innovations continue to provide safe alternatives to petroleum-based and environmentally-toxic competitors.

Currently, Nutek's products are on the shelves of Home Depot, Ace Hardware, True Value, Kroger, Northern Tool and others.

Introduced in December, 2009, Nutek's latest line of innovative products includes a series of extra-large, 100% biodegradable, high performance cloth wipes.

NUTEK'S® HIGH-PERFORMANCE CLEANER GRIME OFF® NOW AVAILABLE IN FOAMING SPRAY CAN

Nutek introduces their Mean but Green™ foaming cleaner and degreaser, Grime Off™. This Nutek innovation features their signature 100% recyclable aluminum spray can, and a formulation powerful enough to degrease heavy industrial grease and grime. Featuring a non-toxic nano-dispersed cleaning chemistry, Grime Off™ readily outperforms cleaners and degreasers that contain dangerous solvents.

Putting their products to the test, Nutek recently accepted the challenge of cleaning a Boeing 747 at the Cleveland Hopkins International Airport. Focusing on the aircraft exterior, the Nutek team, working with aircraft maintenance professionals, used just three heavy-duty Grime Off™ wipes, and a can of Nutek's new Grime Off™ foaming spray to clean completely the aircraft's landing gear. The new process of using Grime Off™ was able to save maintenance workers 50% of their time, while eliminating toxic fumes and waste run-off.

Aircraft maintenance officials were impressed with the Grime Off™ trial. "Normally, we cover up numerous cannon plus, bearings, control cables and tires to protect them from high-pressure cleaning equipment and caustic, corrosive cleaning materials," states a Cleveland Airport Aircraft Technician.

Cathy Horton, Nutek CEO, agrees. "While many maintenance formulas remain toxic and ineffective, Nutek is raising the bar by creating cleaning and lubricating solutions that outperform their competitors, reduces costs, eliminates waste and is environmentally-sustainable."

"Considering how tough it is to clean a Boeing 747," explains Nutek CEO Cathy Horton, "you can only imagine what Grime Off™ can do in the consumer's home or in the professional's arsenal of safe products."

A video news release launched April 20th showcases the cleaning of the Boeing 747.

In the home, Grime Off™ is useful in cleaning ovens, hard surfaces and dirty, gritty or grimy surfaces. In the professional market, Grime Off™ cleans hubcaps and alloy rims, removes break dust and cuts through grease, oil, film and other residue from hands, work benches, floors and counter tops. Perfect for cleaning lawn equipment, tools and tires, Grime Off™ spray cans are a must-have item in every toolkit for easy and fast clean-up during and after projects. Formulated for organic materials, Grime Off™ is 100% biodegradable and safe to use at home, in the garage, in schools, in hospitals, in office complexes and in tough industrial environments.

The Nutek Grime Off™ products are sold direct, and are available for wholesale and retail distribution. The foaming spray and wipes can be purchased by calling 1-800-NUTЕК-4-U or through their website at www.nutekgreen.com.
